

BIOLOGY *of* REPRODUCTION

Official Journal of the Society for
the Study of Reproduction

AUGUST 2006

VOLUME 75 NUMBER 2

Biology of Reproduction Highlights	159
Grafting Period and Donor Age Affect the Potential for Spermatogenesis in Bovine Ectopic Testis Xenografts	160
<i>Jonathan A. Schmidt, Jeanene M. de Avila, and Derek J. McLean</i>	
Donor age and grafting period have significant effects on the growth, development, and ultimately spermatogenesis in bovine ectopic testis xenografts.	
Effect of Vascular Endothelial Growth Factor and Testis Tissue Culture on Spermatogenesis in Bovine Ectopic Testis Tissue Xenografts	167
<i>Jonathan A. Schmidt, Jeanene M. de Avila, and Derek J. McLean</i>	
Treatment of grafts with vascular endothelia growth factor but not short-term pregrafting testis culture improves the efficiency of bovine ectopic testis tissue grafting.	
The Estrogen Early Response Gene <i>FOS</i> Is Altered in a Baboon Model of Endometriosis	176
<i>Julie M. Hastings, Kevin S. Jackson, Patricia A. Mavrogianis, and Asgerally T. Fazleabas</i>	
<i>FOS</i> mRNA and protein are increased in the eutopic endometrium of baboons experimentally induced with endometriosis.	
Adrenomedullin Peptide: Gene Expression of Adrenomedullin, its Receptors and Receptor Activity Modifying Proteins, and Receptor Binding in Rat Testis—Actions on Testosterone Secretion	183
<i>Yuk-Yin Li, Isabel Shui-Shan Hwang, Wai-Sum O, and Fai Tang</i>	
Adrenomedullin is produced in the rat testis and inhibits testosterone release.	
Protein Domains Govern the Intracellular Distribution of Mouse Sperm AKAP4	189
<i>Rick W. Nipper, Brian H. Jones, George L. Gerton, and Stuart B. Moss</i>	
Various domains of mouse AKAP4 are responsible for its intracellular distribution and assembly of AKAP4 into a macromolecular complex.	
Identification of a Hamster Sperm 26-Kilodalton Dehydrogenase/Reductase That Is Exclusively Localized to the Mitochondria of the Flagellum	197
<i>Subir K. Nagdas, Virginia P. Winfrey, and Gary E. Olson</i>	
Biochemical and immunocytochemical studies show that hamster sperm 26-kDa dehydrogenase/reductase is localized to the mitochondria and has solubility properties similar to mitochondrial capsule proteins.	
Regulation of FAS Ligand Expression by Chemokine Ligand 2 in Human Endometrial Cells	203
<i>Belgin Selam, Umit A. Kayisli, G. Eda Akbas, Murat Basar, and Aydin Arici</i>	
Increased FASLG expression by CCL2 induces apoptosis of T-lymphocytes in human endometrium and thus may produce an immunotolerant environment for the survival of ectopic implants.	
Irreversible Barrier to the Reprogramming of Donor Cells in Cloning with Mouse Embryos and Embryonic Stem Cells	210
<i>Yukiko Ono and Tomohiro Kono</i>	
Developmental abnormalities such as placentomegaly and embryo loss during development occur even in cloned embryos reconstructed with nuclei from preimplantation-stage embryos, and these abnormalities are not specific to somatic cloning.	
Distinct Regulation by Steroids of Messenger RNAs for <i>FSHR</i> and <i>CYP19A1</i> in Bovine Granulosa Cells	217
<i>Wenxiang Luo and Milo C. Wiltbank</i>	
Androgen directly stimulated <i>FSHR</i> mRNA and synergized with FSH and estradiol-17beta to increase <i>CYP19A1</i> mRNA in bovine granulosa cells.	
Cloned Transgenic Swine Via In Vitro Production and Cryopreservation	226
<i>Rongfeng Li, Liangxue Lai, David Wax, Yanhong Hao, Clifton N. Murphy, August Rieke, Melissa Samuel, Mike L. Linville, Scott W. Korte, Rhobert W. Evans, James R. Turk, Jing X. Kang, William T. Witt, Yifan Dai, and Randall S. Prather</i>	
Combining the techniques of lipid removal and vitrification can result in the birth of pigs after somatic cell nuclear transfer that uses in vitro-matured oocytes.	

Late but Not Early Gestational Maternal Growth Hormone Treatment Increases Fetal Adiposity in Overnourished Adolescent Sheep	231
<i>Jacqueline M. Wallace, Masatoshi Matsuzaki, John Milne, and Raymond Aitken</i>	
Maternal growth hormone treatment during late pregnancy partially alleviates fetal growth restriction, independent of changes in placental size, and has a profound effect on fetal adiposity.	
Differential Endocrine Regulation of Genes Enriched in Initial Segment and Distal Caput of the Mouse Epididymis as Revealed by Genome-Wide Expression Profiling	240
<i>Petra Sipilä, Dwi Ari Pujianto, Ramin Shariatmadari, Janne Nikkilä, Mari Lehtoranta, Ilpo T. Huhtaniemi, and Matti Poutanen</i>	
Expression profiling revealed that factors other than androgens are important for the expression of IS-enriched genes, whereas the expression of caput-enriched genes is typically regulated by androgens.	
Poor Centrosomal Function of Cat Testicular Spermatozoa Impairs Embryo Development In Vitro after Intracytoplasmic Sperm Injection	252
<i>Pierre Comizzoli, David E. Wildt, and Budhan S. Pukazhenth</i>	
Compared to those in ejaculated spermatozoa, the centrosomes of cat testicular spermatozoa give rise to poor sperm aster formation, resulting in delayed first cleavage and compromised in vitro embryo development after sperm microinjection.	
Photoperiodic Regulation of Compensatory Testicular Hypertrophy in Hamsters	261
<i>Matthew J. Paul, Jin Ho Park, Teresa H. Horton, Maria I. Alvarez, Morgan K. Burke, Ned J. Place, and Irving Zucker</i>	
Day length alters the HPG response to hemi-castration; only short days block FSH hypersecretion in juvenile Siberian hamsters and prevent compensatory testicular hypertrophy in both juvenile and adult Siberian hamsters.	
Multiple Glycolytic Enzymes Are Tightly Bound to the Fibrous Sheath of Mouse Spermatozoa	270
<i>Michelle Krisfalusi, Kiyoshi Miki, Patricia L. Magyar, and Deborah A. O'Brien</i>	
Multiple glycolytic enzymes are present in highly purified fibrous sheath preparations, suggesting that localization of this central metabolic pathway is essential for regulating sperm motility.	
Transcriptional Regulation of Cyclin D2 by the PKA Pathway and Inducible cAMP Early Repressor in Granulosa Cells	279
<i>Luis C. Muñoz, Ghassan Yehia, Elisabeth Mémin, Pillarisetty V.A.L. Ratnakar, and Carlos A. Molina</i>	
A single cAMP response element mediates the hormonal regulation of cyclin D2 expression by the PKA pathway and inducible cAMP early repressor in granulosa cells.	
Progesterone Regulation of Preimplantation Conceptus Growth and Galectin 15 (LGALS15) in the Ovine Uterus . .	289
<i>M. Carey Satterfield, Fuller W. Bazer, and Thomas E. Spencer</i>	
Exogenous progesterone stimulates preimplantation ovine blastocyst growth and development in association with endometrial LGALS15.	
Regional Expression of Prostaglandin E2 and F2alpha Receptors in Human Myometrium, Amnion, and Choriondecidua with Advancing Gestation and Labor	297
<i>Peta L. Grigsby, Suren R. Sooranna, Bernice Adu-Amankwa, Brad Pitzer, Diane E. Brockman, Mark R. Johnson, and Leslie Myatt</i>	
PG receptors were differentially expressed in maternal and fetal tissues suggesting different regulatory mechanisms among these tissues and an independent function of these receptors in the amnion and choriondecidua to that in the myometrium.	
Additions and Corrections	306
