Minireview. Defining Postpartum Uterine Disease and the Mechanisms of Infection and Immunity in the Female Reproductive Tract in Cattle ........................................................... 1025
I. Martin Sheldon, James Cronin, Leopold Goetze, Gaetano Donofrio, and Hans-Joachim Schuberth
Postpartum viral and bacterial uterine infections in cattle cause infertility principally mediated through innate immune mechanisms in endometrial and ovarian follicle cells that induce inflammation and alter endocrine function.

Noninvasive Monitoring of Reproductive Activity Based on Fecal Progestagen Profiles and Sexual Behavior in Koalas, Phascolarctos cinereus .......................................................... 1033
Satoshi Kusuda, Hisashi Hashikawa, Masato Takeda, Kazuhiro Takeda, Hideki Ito, Yuka Ogata-Kobayashi, Masako Hashimoto, Mitsuki Ogata, Koki Morikaku, Sayaka Araki, Tsubasa Makino, and Osamu Doi
Fecal progestagen monitoring combined with behavioral estrus observations is a noninvasive alternative to blood hormone concentrations analysis for understanding reproductive activity in the koala.

Amino Acid Transport Mechanisms in Mouse Oocytes During Growth and Meiotic Maturation ........... 1041
Ame´lie M.D. Pelland, Hannah E. Corbett, and Jay M. Baltz
Three amino acid transport systems are active in growing and maturing mouse oocytes and three more become upregulated during meiotic maturation, while no additional mechanisms of amino acid transport are contributed by coupled follicular cells.

Development of Spermatogonial Cell Transplantation in Nibe Croaker, Nibea mitsukurii (Perciformes, Sciaenidae) .......................................................................................... 1055
Yutaka Takeuchi, Kentaro Higuchi, Takashi Yatabe, Misako Miwa, and Goro Yoshizaki
Intraperitoneal transplantation of spermatogonia in a marine teleost allows the potential for production of donor-derived gametes of large body fish in short generation surrogate species.

The Effect of Linolenic Acid on Bovine Oocyte Maturation and Development ................................. 1064
Waleed F. Marei, D. Claire Wathes, and Ali A. Fouladi-Nashta
Linolenic acid affects oocyte maturation and improves embryo development.

wnt4 Is Associated with the Development of Ovarian Tissue in the Protandrous Black Porgy, Acanthopagrus schlegeli ........................................................................................................... 1073
Guan-Chung Wu and Ching-Fong Chang
Signaling by wnt4 in early ovarian development and ovarian growth/maturation is associated with natural sex change, but not sex differentiation in the black porgy.

Organotypic Cultures of Prepubertal Mouse Testes: A Method to Study Androgen Action in Sertoli Cells while Preserving their Natural Environment ......................................................... 1083
Karel De Gendt, Chris McKinnell, Ariane Willems, Philippa T.K. Saunders, Richard M. Sharpe, Nina Atanasova, Johannes V. Swanen, and Guido Verhoeven
Organotypic testis cultures, in contrast to primary Sertoli cell cultures, preserve androgen responsiveness of Sertoli cell expressed genes and facilitate analysis of their regulation.

Androgen Receptor Antagonism and an Insulin Sensitizer Block the Advancement of Vaginal Opening by High-Fat Diet in Mice ............................................................ 1093
Diana S. Brill and Suzanne M. Moenter
Advancement of vaginal opening in mice by a high-fat diet is blocked by both androgen receptor antagonists and an insulin sensitizer, suggesting that androgens and insulin have a role in the pubertal process.

Effects of Atrazine and Its Withdrawal on Gonadotropin-Releasing Hormone Neuroendocrine Function in the Adult Female Wistar Rat ........................................................... 1099
Chad D. Foradori, Laura R. Hinds, William H. Hanneman, and Robert J. Handa
Withdrawal from the chlorotriazine herbicide, atrazine reverses its inhibition of th LH surge and activation of GnRH neurons after 4 days in the rat.

Effect of Cryopreservation on Nitric Oxide Production by Stallion Spermatozoa ..................................... 1106
C. Ortega Ferrusola, L. González Fernández, B. Maclacs García, C. Salazar-Sandoval, A. Morillo Rodríguez, H. Rodríguez Martínez, J.A. Tapia, and F.J. Peña
Cryopreservation affects the ability of stallion spermatozoa to produce nitric oxide in a sire-dependent manner. Further, production of nitric oxide is compromised in egg yolk containing extenders.
The Involvement of Proline-Rich 15 in Early Conceptus Development in Sheep ......................................................... 1112
Scott H. Purcell, Jeremy D. Cantlon, Casey D. Wright, Luiz E. Henkes, George E. Seidel Jr., and Russell V. Anthony

Proline-rich 15 (PRR15) is highly expressed during a narrow window of conceptus development, and targeted degradation of PRR15 mRNA leads to conceptus demise.

Dynamic Expression of Calcium-Regulatory Molecules, TRPV6 and S100G, in the Uterine Endometrium During Pregnancy in Pigs ............................................................................................................. 1122
Yohan Choi, Heewon Seo, Mingoo Kim, and Hakhyun Ka

Spatial and temporal expression of TRPV6 and S100G are dynamically regulated in the uterine endometrium during pregnancy.

Restoration of On-Time Embryo Implantation Corrects the Timing of Parturition in Cytosolic Phospholipase A2 Group IVA Deficient Mice ............................................................................................................. 1131
Naoko Brown, Jason D. Morrow, James C. Slaughter, Bibhash C. Paria, and Jeff Reese

The delayed parturition phenotype in Pla2g4a-null mice is primarily due to deferral of implantation. The role of PLA2G4A in timely parturition appears to be critically related to its actions in early pregnancy.

Differential Effects of Follistatin on Nonhuman Primate Oocyte Maturation and Pre-Implantation Embryo Development In Vitro ............................................................................................................. 1139
Catherine A. VandeVoort, Namdori R. Muango, Young S. Lee, George W. Smith, and Keith E. Latham

Follistatin supplementation of culture medium after fertilization improves primate embryo development, while addition during in vitro maturation decreases oocyte developmental potential.

Male Germline and Embryonic Stem Cell Lines from NOD Mice: Efficient Derivation of GS Cells from a Nonpermissive Strain for ES Cell Derivation ............................................................................................................. 1147
Hiroshi Ohta, Yasuhide Ohinata, Masahito Ikawa, Yuka Morioka, Yuko Sakaide, Mitiomori Saitou, Osami Kanagawa, and Teruhiko Wakayama

Germline stem cell lines can be efficiently established from a nonpermissive strain of NOD mice for ES cell derivation.

Social Subordination and Polymorphisms in the Gene Encoding the Serotonin Transporter Enhance Estradiol Inhibition of Luteinizing Hormone Secretion in Female Rhesus Monkeys ............................................................................................................. 1154
Vasiliki Michopoulos, Sarah L. Berga, Jay R. Kaplan, and Mark E. Wilson

Socially subordinate female rhesus monkeys are hypersensitive to negative feedback inhibition of LH by estradiol.

Aging Alters Histone H4 Acetylation and CDC2A in Mouse Germinal Vesicle Stage Oocytes ............................................. 1164
Iris Manosalva and Aitor González

Histone acetylation of H4K12 and CDC2A are altered by aging in germinal vesicle oocytes.

Expression of Endometrial Protein Kinase A During Early Pregnancy in Bonnet Monkeys (Macaca radiata) .............. 1172

Expression of the endometrial protein kinase alpha regulatory subunit 1 is up-regulated by the embryo and by estrogenic stimuli.

Production of Germline Transgenic Prairie Voles (Microtus ochrogaster) Using Lentiviral Vectors ..................................................... 1189
Zoe R. Donaldson, Shang-Hsun Yang, Anthony W.S. Chan, and Larry J. Young

Lentiviral vector-mediated gene transfer into single-cell embryos results in germline transgenesis in an alternative laboratory rodent species.

Rat $hd$ Mutation Reveals an Essential Role of Centrobin in Spermatid Head Shaping and Assembly of the Head-Tail Coupling Apparatus ............................................................................................................. 1196
František Liška, Claudia Goselle, Eugene Rivkin, Laura Tres, M. Cristina Cardoso, Petra Domaina, Eliška Krejčí, Pavel Šnajdr, Min Ae Lee-Kirsch, Dirk G. de Rooij, Vladimír Křen, Drahomíra Křenová, Abraham L. Kierszenbaum, and Norbert Hubner

Truncation of centrobin in $hd/hd$ rats causes sperm decapitation.

Regulation of Lhb and Egr1 Gene Expression by GNRH Pulses in Rat Pituitaries Is Both c-Jun N-Terminal Kinase (JNK)- and Extracellular Signal-Regulated Kinase (ERK)-Dependent ..................................................... 1206
Laura L. Burger, Daniel J. Haisenleder, Kevin W. Aylor, and John C. Marshall

GNRH pulse frequency does not differentially regulate Egr1 gene transcription or EGR1 protein, while Egr1 and Lhb gene transcriptions are regulated by both MAPK8/9(JNK) and MAPK1/3(ERK).
Significance of Neonatal Testicular Sex Steroids to Defeminize Anteroventral Periventricular Kisspeptin Neurons and the GnRH/LH Surge System in Male Rats .................................................. 1216
Tamami Homma, Mototsugu Sakakibara, Shunji Yamada, Mika Kinoshita, Kinuyo Iwata, Junko Tomikawa, Tetsuhiro Kanazawa, Hisanori Matsui, Yoshihiro Takatsu, Tetsuya Ohtaki, Hirokazu Matsumoto, Yoshihisa Uenoyama, Kei-ichiro Maeda, and Hiroko Tsukamura
Neonatal castration rescues anteroventral periventricular kisspeptin expression and LH surge-generating system in genetically male rats.

Preterm and Term Cervical Ripening in CD1 Mice (Mus musculus): Similar or Divergent Molecular Mechanisms? .............................................................. 1226
Juan M. Gonzalez, Hua Xu, Jinghua Chai, Ella Ofori, and Michal A. Elovitz
The molecular mechanisms and pathways governing preterm and term cervical ripening are heterogeneous with the epithelial cell differentiation pathway potentially involved in term postpartum cervical repair.
